

Serial No. 09/741,908

Attorney Docket No. 69.001

LISTING OF CLAIMS:

1. (currently amended) A method for determining prices of electronic entity events for exchange transactions among parties in an electronic exchange, comprising:

receiving electronic entity events for exchange transactions between first and second parties serviced by a third party;

accumulating the electronic entity events into a collection of electronic entity events; and
dynamically and automatically, by a computer, pricing servicing of the events by the third party responsive to an electronic entity event pricing plan ~~where the pricing is based on a collection of the exchange transactions,~~

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an exchange transaction is determined from the outcome of the at least one rule using the exchange transaction corresponding to the electronic entity event as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

wherein the pricing includes selecting the pricing plan for the exchange transaction to correspond to the first party, the second party or the third party of the exchange transaction, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic entity event.

2. (Previously presented) A method as recited in claim 1, wherein the event comprises one of a transaction with a good/service exchanged as part of the transaction, multiple

Serial No. 09/741,908

Attorney Docket No. 69.001

transactions with goods/services, a product query, an advertisement review, transferring to another site, an exchange subscription fee, or a customer characteristic.

3. (original) A method as recited in claim 1, wherein the pricing is responsive to relationships among buyers and sellers comprising negotiated customer specific rates and discounts.

4. (Canceled)

5. (Currently amended) A method as recited in ~~claim 4~~claim 1, wherein said ~~functions~~ rules price the transaction across goods/services.

6. (Currently amended) A method as recited in ~~claim 4~~claim 1, wherein the rules ~~based functions~~ comprise conditional decisions.

7. (Currently amended) A method as recited in ~~claim 4~~claim 1, wherein the rules ~~based functions~~ comprise pricing calculation algorithms.

8. (Previously presented) A method as recited in claim 7, wherein the algorithms comprise one of single unit, double unit, taper discount, tier, tier discount, percent, flat, charge, minimum, maximum, accumulation, threshold, multi-unit or taper charges.

9. (Original) A method as recited in claim 1, wherein said electronic event has a transaction price and a good/service price.

Serial No. 09/741,908

Attorney Docket No. 69.001

10. (Original) A method as recited in claim 1, wherein said electronic event comprises multiple transactions.

11. (Original) A method as recited in claim 1, wherein the pricing comprises detail and summary pricing.

12. (Currently amended) A method associated with an electronic exchange which produces electronic exchange events for exchange transactions among parties in an electronic exchange, said method comprising:

receiving the electronic exchange events for exchange transactions between first and second parties serviced by a third party;

accumulating the electronic exchange events into a collection of electronic exchange events; and

dynamically and automatically, by a computer, pricing servicing of the electronic exchange events responsive to an electronic exchange event pricing plan ~~where the pricing is based on a collection of the exchange transactions,~~

wherein there are plural different pricing plans.

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an exchange transaction is determined from the outcome of the at least one rule using the exchange transaction corresponding to the electronic exchange event as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database.

Serial No. 09/741,908

Attorney Docket No. 69.001

wherein the pricing includes selecting the pricing plan for the exchange transaction to correspond to the first party, the second party or the third party of the exchange transaction, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange event.

13. (Currently amended) A method for determining prices of electronic exchange events for exchange transactions among parties in an electronic exchange, comprising:

receiving an electronic exchange transaction request;

accumulating electronic exchange transaction requests into a collection of electronic exchange transaction requests;

performing an electronic exchange function responsive to the electronic exchange transaction request; ~~and~~

dynamically and automatically, by a computer, pricing servicing of electronic exchange events responsive to an electronic exchange event pricing plan ~~where the pricing is based on a collection of the exchange events;~~

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an electronic exchange transaction request is determined from the outcome of the at least one rule using the electronic exchange transaction request as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

Serial No. 09/741,908

Attorney Docket No. 69.001

wherein the pricing includes selecting the pricing plan for the electronic exchange transaction request to correspond to at least one of the parties of the exchange transaction, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange transaction request.

14. (Currently amended) A method for determining prices for exchange events among parties in an electronic exchange, comprising:

receiving electronic exchange events;

accumulating the electronic exchange events into a collection of electronic exchange events; and

dynamically and automatically, by a computer, pricing servicing of the electronic exchange events responsive to an electronic exchange event pricing plan having transaction pricing, cross product pricing, summary pricing and non-transaction pricing ~~where the pricing is based on a collection of the exchange events,~~

wherein there are plural different pricing plans.

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an electronic exchange event is determined from the outcome of the at least one rule using the electronic exchange event as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule.

wherein the rules are stored in a database,

wherein the pricing includes selecting the pricing plan for the electronic exchange event to correspond to the electronic exchange event, traversing the decision network in the selected

Serial No. 09/741,908

Attorney Docket No. 69.001

pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange event.

15. (Currently amended) A method for determining prices of electronic exchange events for exchange transactions in an electronic exchange, comprising:

receiving electronic exchange transaction requests;

accumulating the electronic exchange transaction requests into a collection of electronic exchange transaction requests;

performing electronic exchange functions responsive to the electronic exchange request and where the function comprises transactions exchanging a goods/services having a goods/services prices; and

dynamically and automatically, by a computer, pricing servicing of the electronic exchange transactions with detail and summary pricing using an electronic exchange event pricing plan responsive to relationships among buyers and sellers and comprising negotiated customer specific rates,

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an electronic exchange transaction request is determined from the outcome of the at least one rule using the electronic exchange transaction request as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

Serial No. 09/741,908

Attorney Docket No. 69.001

wherein the pricing includes selecting the pricing plan for the electronic exchange transaction request to correspond to the buyer or seller of the electronic exchange transaction request, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange transaction request, and

where the rules in the dynamic pricing plan uses a decision network having rule-based functions include pricing the transactions, pricing across the transactions, pricing across the goods/services, pricing with charge limitations and pricing non-transactions using conditional pricing decisions and pricing calculation algorithms comprising single unit, double unit, taper discount, tier, tier discount, percent, flat charge, minimum, maximum, accumulation, threshold, multi-unit and taper charges where the pricing is based on a~~the~~ collection of the exchange transactions.

16. (Currently amended) A system for determining prices of electronic exchange events for exchange transactions among parties in an electronic exchange, comprising:

an electronic exchange handling electronic exchange events and accumulating exchange events into a collection of exchange events; and

a pricing mechanism dynamically pricing servicing of the electronic exchange events responsive to an electronic exchange event pricing plan where the pricing mechanism comprises a function pricing servicing of the electronic exchange events based on a~~the~~ collection of the exchange events,

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans,

Serial No. 09/741,908

Attorney Docket No. 69,001

wherein a path from the node for an electronic exchange event is determined from the outcome of the at least one rule using the electronic exchange event as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

wherein the pricing includes selecting the pricing plan for the electronic exchange event to correspond to the electronic exchange event, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange event.

17. (Original) A system as recited in claim 16, wherein said pricing mechanism comprises a code-based pricer and non-code based rules used by the pricer to price the event.

18. (Currently amended) A computer readable storage controlling a computer by accumulating electronic exchange events into a collection of exchange events, and dynamically and automatically pricing servicing of electronic exchange events responsive to an electronic exchange event pricing plan where the pricing is based on the collection of the exchange events,

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an electronic exchange event is determined from the outcome of the at least one rule using the electronic exchange event as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

Serial No. 09/741,908

Attorney Docket No. 69.001

wherein the pricing includes selecting the pricing plan for the electronic exchange event to correspond to the electronic exchange event, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic exchange event.

19. (Currently amended) A method for determining prices of electronic entity events for exchange transactions among parties in an electronic exchange, comprising:

receiving electronic entity events for transactions; and

dynamically and automatically, by a computer, pricing servicing of the events responsive to an electronic entity event pricing plan where the pricing is based on a collection of the exchange transactions; and

accumulating exchange transactions into the collection of exchange transactions,

wherein there are plural different pricing plans,

wherein each pricing plan includes a decision network, wherein a node of the decision network includes at least one rule, wherein the rules can be shared among plural pricing plans, wherein a path from the node for an exchange transaction is determined from the outcome of the at least one rule using the exchange transaction as input, wherein the at least one rule can specify use of the collection to determine the outcome of the at least one rule,

wherein the rules are stored in a database,

wherein the pricing includes selecting the pricing plan for the exchange transaction to correspond to the exchange transaction, traversing the decision network in the selected pricing plan, and executing the rules in the traversed path through the decision network to calculate a price for the electronic entity event.

Serial No. 09/741,908

Attorney Docket No. 69.001

20. (New) The method of claim 1, wherein the collection specified by the rules is the accumulated exchange transactions over a time period.

21. (New) The method of claim 1, wherein the collection specified by the rules is the exchange transactions accumulated before the electronic entity event.

22. (New) The method of claim 1, wherein the at least one rule further can specify aggregating a field in the electronic entity events in the collection, wherein the aggregated field is used to determine the outcome of the at least one rule.

23. (New) The method of claim 1, further comprising:
after accumulating an electronic entity event and after the pricing, modifying the pricing plan,
after the modifying, performing the pricing for the electronic entity event using the modified pricing plan.
